

tranch_master_basic

a chart-based representation of how the dataset was distributed

Chart Titles

- A : person count (none, one, two, three)
- B : occluded (no, yes, unknown)
- C : posture (sitting, lying, standing, unknown)
- D : person type (patient, staff, other)

personCount(A)

Count of person_count for each person_count. The view is filtered on person_count, which excludes how_many.

occluded(B)

Count of primary_occluded for each primary_occluded. The view is filtered on primary_occluded, which excludes Null and primary_occluded.

posture(C)

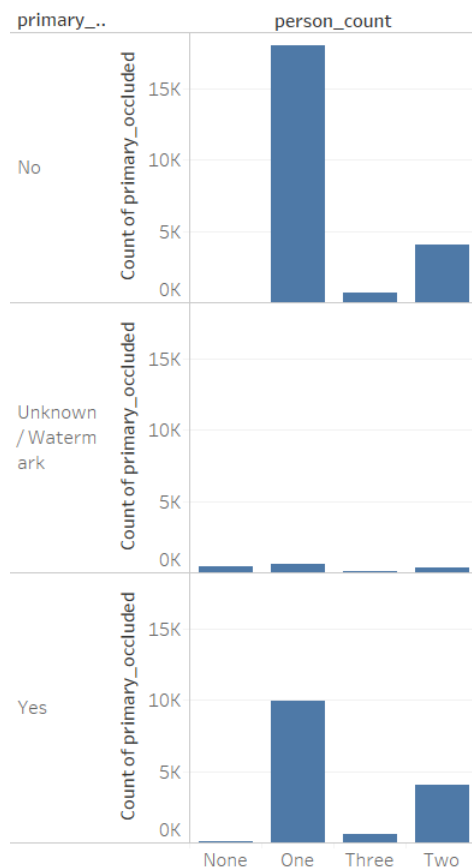

Count of primary_posture for each primary_posture. The view is filtered on primary_posture, which excludes Null and primary_posture.

personType(D)

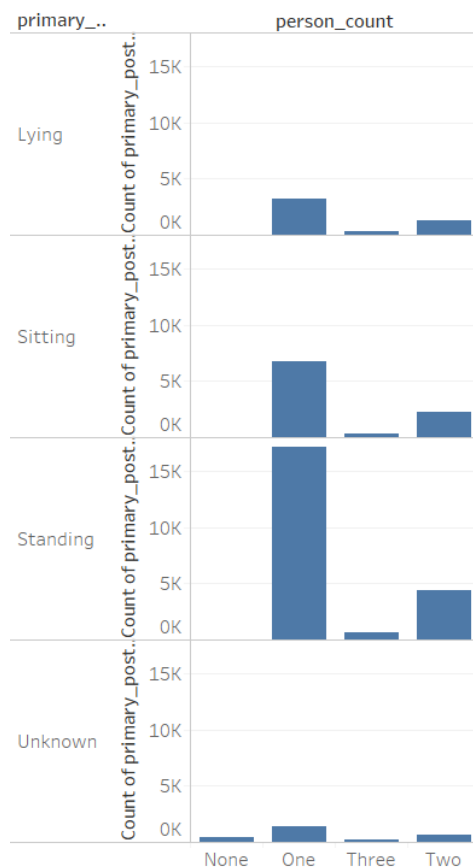

Count of person_type for each person_type. The view is filtered on person_type, which excludes Null and staff_patient_other.

AB

Count of primary_occluded for each person_count broken down by primary_occluded. The view is filtered on primary_occluded, which excludes Null and primary_occluded.

AC

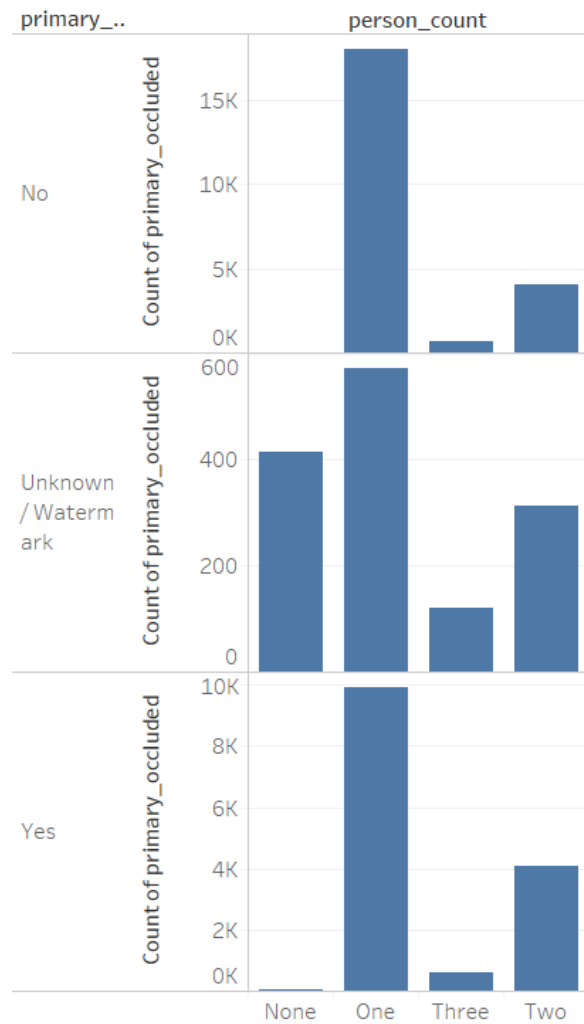

Count of primary_posture for each person_count broken down by primary_posture. The view is filtered on primary_posture, which excludes Null and primary_posture.

AD

Count of person_type for each person_count broken down by person_type. The view is filtered on person_type, which excludes Null and staff_patient_other.

AB

Count of primary_occluded for each person_count broken down by primary_occluded. The view is filtered on primary_occluded, which excludes Null and primary_occluded.

AB(2)

Count of primary_occluded for each person_count broken down by primary_occluded. The view is filtered on primary_occluded, which excludes Null and primary_occluded.

AC

Count of primary_posture for each person_count broken down by primary_posture. The view is filtered on primary_posture, which excludes Null and primary_posture.

AC(2)

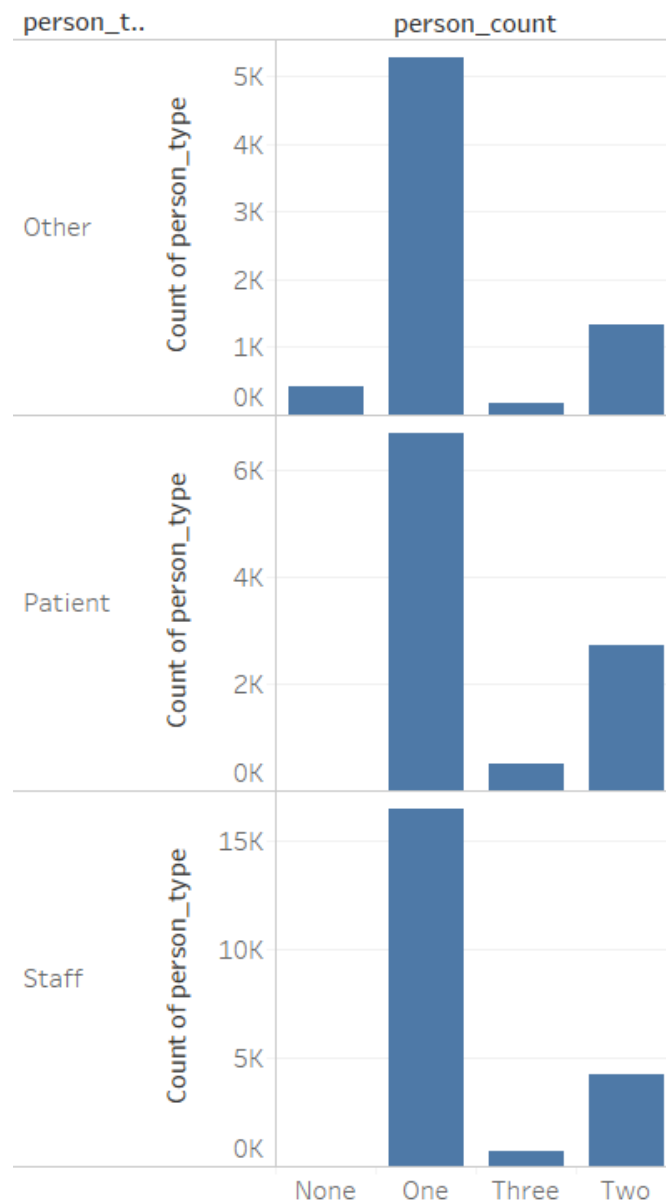

Count of primary_posture for each person_count broken down by primary_posture. The view is filtered on primary_posture, which excludes Null and primary_posture.

AD

Count of person_type for each person_count broken down by person_type. The view is filtered on person_type, which excludes Null and staff_patient_other.

AD(2)

Count of person_type for each person_count broken down by person_type. The view is filtered on person_type, which excludes Null and staff_patient_other.

BA

Count of person_count for each primary_occluded broken down by person_count. The view is filtered on person_count, which keeps None, One, Three and Two.

BC

Count of primary_posture for each primary_occluded broken down by primary_posture. The view is filtered on primary_posture, which excludes Null and primary_posture.

BD

Count of person_type for each primary_occluded broken down by person_type. The view is filtered on person_type, which excludes Null and staff_patient_other.

BA (2)

Count of person_count for each primary_occluded broken down by person_count. The view is filtered on person_count, which keeps None, One, Three and Two.

BC(2)

Count of primary_posture for each primary_occluded broken down by primary_posture. The view is filtered on primary_posture, which excludes Null and primary_posture.

BD(2)

Count of person_type for each primary_occluded broken down by person_type. The view is filtered on person_type, which excludes Null and staff_patient_other.

BA

Count of person_count for each primary_occluded broken down by person_count. The view is filtered on person_count, which keeps None, One, Three and Two.

BA (2)

Count of person_count for each primary_occluded broken down by person_count. The view is filtered on person_count, which keeps None, One, Three and Two.

BC

Count of primary_posture for each primary_occluded broken down by primary_posture. The view is filtered on primary_posture, which excludes Null and primary_posture.

BC(2)

Count of primary_posture for each primary_occluded broken down by primary_posture. The view is filtered on primary_posture, which excludes Null and primary_posture.

BD

Count of person_type for each primary_occluded broken down by person_type. The view is filtered on person_type, which excludes Null and staff_patient_other.

BD(2)

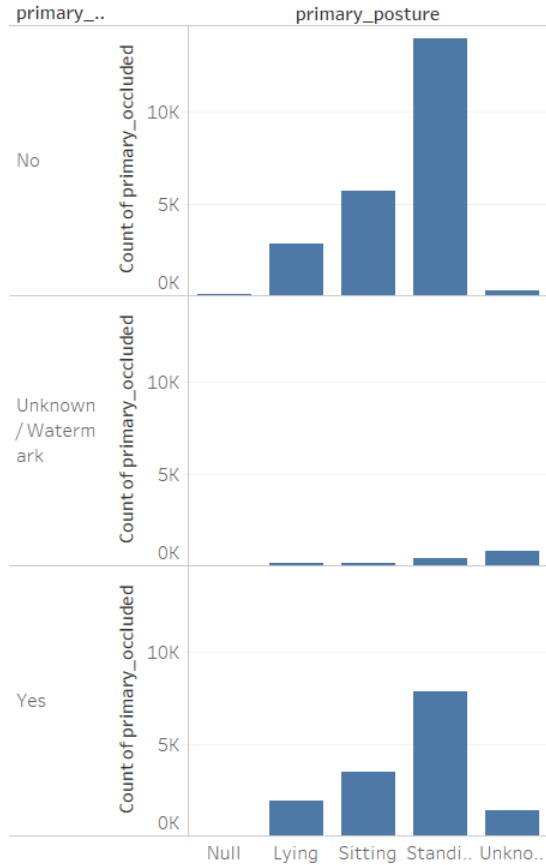

Count of person_type for each primary_occluded broken down by person_type. The view is filtered on person_type, which excludes Null and staff_patient_other.

CD

Count of person_type for each primary_posture broken down by person_type. The view is filtered on person_type, which excludes Null and staff_patient_other.

CB

Count of primary_occluded for each primary_posture broken down by primary_occluded. The view is filtered on primary_occluded, which keeps No, Unknown / Watermark and Yes.

CA

Count of person_count for each primary_posture broken down by person_count. The view is filtered on person_count, which keeps None, One, Three and Two.

CD(2)

Count of person_type for each primary_posture broken down by person_type. The view is filtered on person_type, which excludes Null and staff_patient_other.

CB(2)

Count of primary_occluded for each primary_posture broken down by primary_occluded. The view is filtered on primary_occluded, which keeps No, Unknown / Watermark and Yes.

CA(2)

Count of person_count for each primary_posture broken down by person_count. The view is filtered on person_count, which keeps None, One, Three and Two.

CD

Count of person_type for each primary_posture broken down by person_type. The view is filtered on person_type, which excludes Null and staff_patient_other.

CD(2)

Count of person_type for each primary_posture broken down by person_type. The view is filtered on person_type, which excludes Null and staff_patient_other.

CB

Count of primary_occluded for each primary_posture broken down by primary_occluded. The view is filtered on primary_occluded, which keeps No, Unknown / Watermark and Yes.

CB(2)

Count of primary_occluded for each primary_posture broken down by primary_occluded. The view is filtered on primary_occluded, which keeps No, Unknown / Watermark and Yes.

CA

Count of person_count for each primary_posture broken down by person_count. The view is filtered on person_count, which keeps None, One, Three and Two.

CA(2)

Count of person_count for each primary_posture broken down by person_count. The view is filtered on person_count, which keeps None, One, Three and Two.
